

Prime or Composite?

1	9	7	21	15	11	14
35	51	3	25	17	18	2
49	13	8	5	12	4	10
12	35	16	7	32	19	24
17	41	99	27	13	9	42
54	19	21	11	34	52	17
9	31	14	25	2	8	33

Directions:

Step 1 - Roll the dice to determine who goes first (highest number goes first and players alternate turns throughout the game).

Step 2 - Roll the dice and determine if the number rolled is composite or prime.

Step 3 - Choose ANY number on the board that matches the TYPE of number you rolled and put your marker or lightly shade that number. (Example: If you roll 12, it is composite, you could shade 52 on the grid because it is also composite).

Step 4 - Make a STRAIGHT line of four numbers to win the game.
